

Overdrive® Herbicide

Customer Experiences

Overdrive is a selective post-emergence herbicide for the control of key annual and perennial broadleaf weeds in non-cropland sites, range and pasture land. Examples of non-cropland sites include, but are not limited to:

- railway, utility, pipeline and highway rights-of-way
- railway crossings
- roadside
- utility plant sites
- petroleum tank farms
- pumping installations
- non-agricultural fencerows
- airports

“Flagstaff County has cooperated with BASF Canada and Engage Agro on research trials 3 years in a row with Overdrive Herbicide. We are excited about the control it provides on weeds such as Canada thistle, sweet clover and many other weeds. When tank mixed with other products, lowest label rate can be used (under PMRA tank mix guidelines) and the results have been outstanding. This is especially a benefit when using residual or persistent products. We are excited about this selective weed control tool what will be available in the near future.”

- Brent Hoyland, Sedgewick, AB

“We’ve participated in research trial with Overdrive for the past two years and from the results we see Overdrive as an excellent tool for the selective weed control of Canada thistle, dandelion, leafy spurge and other weeds. More importantly we see Overdrive as a 2,4-D replacement in tank mixes with other products. The Overdrive / Milestone™ and Overdrive / Tordon®101 with the lowest label rate provided equivalent to or superior weed control as compared to there individual products at higher rates. On coarse textured soils, we see this as extremely important.”

- John Johnson, Harting, MB

“In Southern Ontario one of the most common roadside weed problems is wild carrot. DeAngelo Brothers Corporation has worked with BASF Canada and Engage Agro for the past three years on research trials with Overdrive . From our experience, Overdrive provides excellent control of wild carrot, wild parsnip, Canada thistle, sow thistle, dandelions, ragweed, milkweed and many other weed species. We found in particular a tank mix of Overdrive and Escort® provided an excellent selective weed control solution that did not contain any 2,4-D, which has great sensitivity with the public in Ontario. Not only did this combination give us a 2, 4-D free alternative, with its low use rates and safe environmental properties, we as an application company are at ease using these products near sensitive sites.”

- Steve Ford, Orangeville, ON

“Leafy Spurge is a major issue in Saskatchewan. Tordon 22K can provide control at very high rates but is limited as to where it can be used for environmental reasons. The trial conducted using Overdrive plus Tordon 22K at 4.5 l/ha provided excellent control in the season of application. We expect this control to extend into the following season, as this is a common practice south of the border in the states such as Montana, North & South Dakota. The one plus one = three seems to be applicable when using Overdrive as a tank mix partner and a labeled rate of another product. A cost effective solution and a great tool for us to improve on noxious weed control species.”

- Murray Froehlich, Regina, SK
